

ASMITA RAWAT

Python · SQL · Power BI · Tableau

+91 8791102804 | rawatasmita06@gmail.com | [LinkedIn](#) | [GitHub](#) | [Kaggle](#)

PROFESSIONAL SUMMARY

Results-oriented Data Analyst (B.Tech CSE, 2025) with hands-on experience building end-to-end analytics solutions in Python, SQL, and Power BI. Proven ability to turn raw datasets into clear business narratives — from diagnosing revenue patterns across \$2.26M in sales to engineering ML pipelines that achieve 83% predictive accuracy. Comfortable owning the full analytics cycle: data cleaning, EDA, visualization, and stakeholder-ready reporting. Currently pursuing the Google Data Analytics Professional Certificate. Open to DA/BA roles where data can drive measurable outcomes.

TECHNICAL SKILLS

Languages	Python, SQL
Analytics & ML	Pandas, NumPy, Scikit-learn, EDA, Feature Engineering, Data Cleaning, Machine Learning
Visualization	Power BI (DAX, Power Query), Tableau, Matplotlib, Seaborn
Tools & Platforms	MySQL, Excel (PivotTables, VLOOKUP), Jupyter Notebook, VS Code, GitHub

PROJECTS

Superstore Sales Dashboard — Executive BI Report — *Power BI · Power Query · DAX · Excel*

- Designed an executive-level Power BI dashboard analyzing **9,994 orders and \$2.26M in revenue** across 4 regions, 3 product categories, and 4 years of transaction data — enabling leadership to monitor performance at a glance.
- Built 4 custom DAX measures (Total Sales, Orders, Customers, Avg Order Value of **\$459.48**) surfaced via KPI cards, trend lines, and Top-N filters; reduced ad-hoc reporting effort by creating a single source of truth.
- Identified **Technology as the highest-revenue category**, West region contributing **~32% of total sales**, and Nov–Dec as peak demand months — insights directly actionable for inventory planning and seasonal marketing.

Heart Disease Prediction Model — ML Classification Pipeline — *Python · Pandas · NumPy · Scikit-learn · Matplotlib · Seaborn*

- Processed and cleaned the **UCI Heart Disease dataset (300 records, 13+ clinical features)**, resolving missing values and outliers to deliver an analysis-ready, high-quality dataset that formed the model's foundation.
- Built and compared Logistic Regression and KNN classifiers with hyperparameter tuning, reaching **~83% classification accuracy** on held-out test data — demonstrating systematic model evaluation over single-model guessing.

NetReco — Content Recommendation System — *Python · Pandas · NumPy · Matplotlib · Seaborn*

- Ingested and transformed a catalog of **8,800+ Netflix titles**, engineering 10+ numerical features from raw metadata to power a similarity-based recommendation engine.
- Architected a modular EDA → feature engineering → inference pipeline with cached feature vectors, reducing repeated query computation and making the system scalable to larger catalogs.
- Delivered ranked Top-N content recommendations with <1s retrieval time, simulating the core logic behind streaming platform personalisation engines used in production environments.

EDUCATION

B.Tech — Computer Science & Engineering	Graphic Era Hill University	2021 – 2025	65.36%
Class XII	Kendriya Vidyalaya IMA	2021	81.16%
Class X	Kendriya Vidyalaya IMA	2019	87.66%

CERTIFICATIONS & LEARNING

- Google Data Analytics Professional Certificate** — Coursera / Google *In Progress (2026)*
Covers: data cleaning, SQL, R, Tableau, and case-study capstone analysis.
